Cold climate growers now look forward to a future filled with cold hardy and disease resistant grapes that produce award-winning wines.

Decades of University of Minnesota research led to the development of wine grape cultivars that are setting the standard in cold climate viticulture.

‘Marquette’, ‘Frontenac gris’ and ‘La Crescent’ grape varieties are patented in the US and Plant Variety Rights are pending in Canada and other territories. Propagation of these varieties is prohibited without a license. To obtain a license, visit www.license.umn.edu and Search Keyword: Grape.

Please purchase U of M grape varieties from Licensed Nurseries listed at www.grapes.umn.edu. Plus, see the rapidly growing list of exceptional medal winning wines, produced from U of M cold hardy grapes.
